Student Agreement

I understand that I am participating in a **Real World Ready (RWR)** Course.

I understand that I am expected to apply discipline-specific professional knowledge (SLO 1) in an authentic setting. I will

- work in groups on real-world and hands-on projects involving hardware/software co-design
- find sponsors from companies or faculty
- submit the Student Agreement and the Project Application Form including software and hardware requirements for the project after complete feasibility study

I understand that I will demonstrate effective communication in a professionally-authentic form (SLO 2). I will

- demonstrate professional verbal communication skills through oral presentations about the findings to the class
- demonstrate professional written communication skills through the production of technical reports of the final project
- demonstrate multimedia communication skills through creating video clips of the final project

As a student I will reflect on the work, identifying strengths and weaknesses of product and process, and deriving directions for future efforts (SLO 3). I will

- submit the Group Evaluation Form to evaluate and identify strengths and weaknesses of not only other groups but also my own group
- submit the Member Evaluation Form to evaluate and identify strengths and weaknesses of other members' efforts and my own contributions

I will maintain professional behavior to reflect a commitment to quality work (SLO 4). I will

- maintain professional interactions at all times
- maintain professional ethical manner

Project Application Form

<< TYPE ALL INFORMATION >>

Table 1. Project Application Form

Team Name	LaMasia		
Leader Name	Bibek Luitel		
Member Name	Barsha Shrestha	Manoj Lamichhane	Shikshit Dhungana
Project Title	LionFit - An AI Powered Workout Tracker and Planner		
Motivation (Problem, Why)	We now live in a society where most of our jobs are being done online, in front of a computer, on a desk. This has led to many people gaining fat more easily and being more and more unhealthy. Post covid, it has been observed that an individual is walking 1000-3000 steps less, per day. 50-60% of people who transitioned to Work From Home have mostly seen a decrease in physical activity.		
Project Description (What)	Our project helps to incentivise individuals to workout more, get their steps in, track their workout and health. We will utilize AI to recommend workouts to people based on their level.		
Methodology (Approach, How)	We are going to use a BaaS (Backend as a Service) platform like Google Firebase or Supabase for our Backend and Database needs. The UI is going to be designed by us using Flutter and compiled into an Android app. We are also going to use Blender for 3D designing a human muscle anatomy to track user progress per week and what muscle groups they are targeting.		
References (Citations, Links)	https://www.z-anatomy.com/		
Software Requirements	VS Code, Blender, Firebase, Visual Studio		
Hardware Requirements	Android Smartphone for Testing Purposes		
Approval (Check one)	☒ Accepted	☐ Rejected
